# Total Generator Application Service & Maintenance

## Generator Maintenance:

USA offers you generator service support that is available both for routine maintenance and emergencies. All of our technicians are factory-trained and authorized.

- We service all makes and models
- Scheduled inspections of key service item
- 24/7 emergency services
- Load bank testing
- Coolant testing

## ATS & Switchgear Maintenance:

A critical component of an emergency power supply system (EPSS) is the Automatic Transfer Switch (ATS) and Switchgear.

- Complete ATS planned maintenance services for automatic transfer switches by factory trained technicians
- Maintenance of all types of switchgear including paralleling gear, monitoring gear, peak shaving gear, and control centers
- Surveying and reporting of all documentation for customer history files

## Fuel Maintenance:

One of the most critical maintenance issues for diesel powered generator sets is maintaining the condition of stored diesel fuel. A common reason for a generator start failure or under-performance is the lack of or poor quality fuel. Diesel fuel left untreated for long periods can become useless and potentially damaging to the generator. USA offers custom fuel maintenance programs tailored to your needs.

- Fuel polishing and tank waste removal systems
- Customized fuel additive and tank service programs
- Professional fuel applications and industries

## Generator Monitoring:

Ultimate Service Associates offer its remote monitoring system, Gen+Check, as a complete solution for all your remote monitoring needs.

- Reduces the risk of unplanned outages
- USA website lets you review the status of your site anytime, anywhere
- Provides peace of mind about your equipment and your business
- Alerts are sent immediately via email or SMS text messages
- Generator run event reports
